

FW Murphy Millennium Controller File Transfer Guide using MTransfer v1.4.16 January 7, 2013

1.0 General Information

- 1.1 The Millennium controller uses PRJ files which contain the display program and may also contain setpoint files and Isagraf logic program files called resources.
- 1.2 The PRJ files are transferred to the components using MTransfer and a null modem RS232 connection to the components. The interface supports 3 wire RS232.

- 1.3 A USB to RS232 serial null cable may be necessary for PCs that do not have a 9-pin RS232 serial port. The following cable has been tested and confirmed to be 100% compatible with the Millennium.
 - 1.3.1 Startech 1 Port USB to Null Modem RS232 DB9 Serial DCE Adapter Cable with FTDI model # ICUSB232FTN.

NOTE: USB to Serial adapters based on the Prolific and Phillips brand chipsets have timing irregularity that may cause file transfers to fail.

1.4 MTransfer must be installed on the PC used for the file transfers. Access the license agreement and installation from the link below.
